BENEFITS

- No IR, UV, Gas or Electricity in Fiber Optic Cable
- Safe, Remote U.L. Listed Illuminators
- Variety of Color Changes
- Virtually No Maintenance
- Flexible System Configurations
- No Vibration or Fixture Noise
- Multiple Fixtures per Illuminator for End-Emitting Systems

DETAILS

Description A Fiberstars fiber optic lighting system consists of two, sometimes three components. The first component is the *illuminator* or light source. The second component is the *fiber optic cable*. An illuminator projects light into side-emitting fiber optic cable, which looks like flexible neon, or end-emitting fiber optic cable, which acts as point-source lighting. The potential third component is *fixtures* for end-emitting applications.

Illuminators Fiberstars manufactures illuminators using lamps as small as a 75 watt MR16 to as powerful as a 400 watt HID metal halide. All illuminators are U.L. listed and have a variety of optional features to create vibrant illumination in a variety of colors. (Please refer to the illuminator specifications for additional details.)

Fiber Optic Cable Fiberstars coextrudes PVC tubing and fibers to create flexible, durable fiber optic cable. Side-emitting BritePak®-II and SuperStars® fiber optic cable come in several sizes. We recommend for side-emitting applications that both ends of the fiber optic cable are attached to an illuminator, either in a loop or "daisy-chained" between illuminators. End-emitting FiberSpots® and Fire Rated fiber optic cable are available in a number of intensities. One end of the fiber optic cable is connected to an illuminator while the other end emits light for point-lighting applications. (Please refer to the fiber optic cable specifications for additional details.)

Fixtures Fiberscent® fixtures are lampless fixtures for decorative downlighting without heat, ultraviolet radiation or fixture noise. FiberScape® fixtures are used in landscaping applications for cool, vandal resistant lighting that is not subject to system voltage imbalances. With no relamping at each fixture, maintenance is greatly reduced. (Please refer to the fixture specifications for additional details.)

Installation Illuminators are placed in accessible, ventilated areas. Side-emitting fiber optic cable is mounted with straight tracks, clips, standoffs, silicone caulk, tape, screws or a combination of these materials. End-emitting fiber optic cable can be run from the illuminator to each fixture either freely or in conduit. A hot knife is used in all fiber optic cable installations for creating clean optical edges. Fixtures come with their own individual mounting apparatus.
